It is essential that concealed valves are installed giving full access for servicing or maintenance purposes. The recommended aperture for this is 150 diameter and a suitable face plate is provided for finishing. Under no circumstance should valves be "plastered in" with tiling taken up to the dial plate. If practical, rear access should be provided. Failure to follow these instructions, could nullify any warranty and also any responsibility for damage to tiled or decorative finishes. It is essential that pipe lines are flushed before fitting.

PS53C2 & PS53C2-CD

Recessed thermostatic shower mixer on square plate with triple control (flow to shower, spray or bath and temperature).

PS53C1 & PS53C1-CD

Recessed thermostatic shower mixer on rectangular plate with dual control (flow and temperature).

PS53C3 & PS53C3-CD

Recessed thermostatic shower mixer on rectangular plate with quadruple control (flow to shower, spray, bath and temperature).
